

Clinical Waste

Secure clinical waste disposal service

Our clinical waste recovery services

Did you know every year an estimated 16 billion injections are administered worldwide, but not all of the needles and syringes are properly disposed of afterwards.

If you work in the healthcare sector, it's likely that your organisation generates clinical waste. This needs to be packaged, handled and collected correctly, otherwise, if left exposed, it could pose risks to human health and the environment.

Healing our Planet

Bywaters manage all kinds of clinical waste, including sharps such as needles and syringes, infectious materials like blood, human tissue and, chemicals, and items such as dressing, bandages and PPE. We provide you with UN-approved containers which are collected by trained professionals. Providing a flexible service that minimises the risk to you and your business.

Your clinical waste is then transported to an Energy from Waste facility specialising in clinical waste disposal, where it is destroyed through sterile high temperature incineration. This process removes any risk associated with your waste, while also recovering energy to power London homes.

WEEE waste process
