

WEEE Recycling

Ensuring WEEE waste is recycled sustainably

Your WEEE (Waste Electrical and Electronic Equipment) recycling

Did you know Two million tonnes of Waste Electrical and Electronic Equipment (WEEE) items are discarded every year, and it's not always done safely.

Electrical equipment often ends up in landfill, where it can potentially cause damage to the environment. This is because much of it contains chemicals, which leak into the soil and nearby waterways, threatening humans and wildlife alike. Bywaters offers effective waste recycling solutions for these items, including sorting through it to find waste items for reuse. Our experienced team completes this process to ensure that your WEEE waste is handled safely and sustainably.

Any electronic appliance can be included in the WEEE waste stream. We collect every form of WEEE for recycling, including IT equipment and white goods like fridges, washing machines and dishwashers.

Hardwiring sustainability

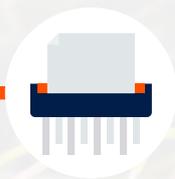

Bywaters ensures all of your WEEE waste will be recycled sustainably, in accordance with the government's WEEE regulations.

Your WEEE waste is transported by our environmentally-friendly Euro 6 fleet to our specialist facilities, where it is then either broken down into its individual component parts for recycling or reused. This helps prevent your WEEE from entering landfill, ensuring it can be used again.

WEEE waste process

We collect your WEEE using our Euro 6 fleet

For IT equipment, we can arrange data wiping services

Any reusable items are donated to charity or local businesses

Each material is then recycled into new products

Non-reusable items are broken down into component parts
